

NetSuite Field	Magento Field	Notes
Credit Card #	Credit Card Number	
Name on Card	Name on Card	
Expires (MM/YYYY)	Expiration Date	
P/N Ref.		This mapping allows credit card payments to be captured by standard NetSuite billing functionality.
Status		All orders are imported with a Pending Fulfillment status.
Payment Method	Credit Card Type	The mapping to the NetSuite Payment Method field only maps credit card payments in Magento. A second field called Magento Payment Method displays non credit card payment methods. Please click here for more info on configuring this mapping.
Magento Payment Method	Payment Method	A text version of the payment method selected in Magento.
Ship Via	Shipping Method	Please click here for more info on configuring this mapping.
Shipping Cost	Shipping & Handling	
Discount	Discount	This mapping does not set the actual discount total in NetSuite. This mapping is only used to tell the connector to compare discount amounts between the two systems and report any differences in the Discount Total Variance field.
Tax Total	Tax	This mapping does not set the actual tax total in NetSuite. This mapping is only used to tell the Connector to compare tax amounts between the two systems and report any differences in the Tax Total Variance field.
Total	Total Due	This mapping does not set the actual total in NetSuite. This mapping is only used to tell the Connector to compare total amounts between the two systems and report any differences in the Order Total Variance field.
